Hello,

A number of years ago Larry van Peursam implemented IDL syntax highlighting for the Mac OSX editor SubEthaEdit (<http://www.subethaedit.net/>). Larry has moved on to other work so it hasn't kept up-to-date.

I have been working on updating and tweaking the implementation, and I am now looking for a tester. If you are interested in giving it a whirl please send an email to me.

Thanks!
Ben
