Humm. And you are opposed to, say, two minutes of programming!?

I guess you could always try XMOVIE if you are wedded to
someone else's solution:

   http://www.dfanning.com/programs/xmovie.pro

Cheers,

David

No - I just thought, why reinvent the wheel - and besides, maybe
someone's come up with a really nifty piece of code with all sorts of
bells and whistles :)

Oh, I thought you were looking for something simple. :-)

Nothing simpler, really, than wrapping those three
XInterAnimate calls up in a procedure that takes
a volume as an argument. Then you have all the bells
and whistles of XINTERANIMATE available to you. As I say,
it would probably take two minutes, tops.

Cheers,

David
