
Subject: ENVI/IDL Problem: wrong version loaded

I have installed ENVI 4.3 installed recently without removing ENVI 4.1. It worked fine for a few days. Then, due to some unknown reason, ENVI 4.1 is loaded every time I try to run ENVI 4.3. Strangely, IDL 6.3 is correctly loaded. Tried to ask RSI but they never replied. Has any of you met similar problems?

This actually reminded me another problem. If I try to load the help window in ENVI 4.1 or IDL 6.1, the system always prompts for installing ENVI 3.6. Wonder if you guys know the answer to this too.

THX
