Hello together!

I am using CW_CLR_INDEX in a widget-application to change my background.color, line.color and others in a DRAW-Widget. It works great, but when I switch to Postscript-Device, for generating the final plot, it chrashes, because WSET is at that device not allowed. But WSET is used inside of the procedure CW_CLR_INDEX. I tried to change !D.WINDOW, but I got the answer it's readonly.

So my question is: How can I use the useful tool CW_CLR_INDEX for the POSTSCRIPT-Device?

Mails to ao@eurad.uni-koeln.de

Thanks

Andreas O.
