Hi group!

I've installed IDL 6.1 on a brand new Mac Intel Core-2-Duo (so, running on Rosetta), and it works fine with calculations. But it is not able to create windows:

```
IDL> window,1
Segmentation fault
pluja:/Applications/rsi/idl_6.1/bin xavi$
```

Any ideas of what can be wrong?

Thank you!

Xavi

lists.sourceforge.jp/mailman/archives/macemacsjp-english/2006-June/000586.html

is a very nice way to ensure all users have their DISPLAY set correctly. Set X11 to launch at login, and all X programs will work from the terminal or other non-xterm launch conditions (Platypus scripts, etc.), correctly for all Fast User users.
