Subject: spawn on IDL virtual machine Posted by Sverre Solberg on Mon, 09 Oct 2006 14:52:23 GMT View Forum Message <> Reply to Message

Is there a way to run code that contains the "spawn" command by the IDL virtual machine? I presume not :-( but would like to ask anyway. This is a code originally made for Unix, so it crashes when running the VM (with spawn) on Windows, which is not so surprising. But perhaps there is a way to test for platform inside the program and modify the call to "spawn" accordingly??
