I hope that someone can help me.

I have a 3D array of data. I am trying to display this using iimage.

When I use the command

iimage, filename(*,*,30)

I get the slice I want through the volume. But if I try to get the slice at another orientation i.e

iimage, filename(30,*,*)

I get an error message that says the first argument is invalid.

If I use the tvscl command I get images in both orientations with no problems but I would rather use iimage as I find further manipulations are easier.

Thanks in advance

Steven
