Kudos to ITTVIS for getting the Intel version of IDL for Mac OS X out so
quickly.

This is a statement from MathWorks about MATLAB for Intel Macs:

> The MathWorks has made a beta test version of MATLAB for Intel Macs available
> to registered users. This version requires Mac OS X 10.4.7 and an Intel Core
> Duo processor.

> The company also posted the following notes about upcoming versions:
> When will support for Intel-based Macs be available for general release?
> Support for Intel-based Mac OS X computers will be available for general
> release with R2007a. For Professional Version products, R2007a is planned for
> March 2007. For Student Version, R2007a is planned for the first half of
> 2007.

Cheers, Ken Bowman

Well, at least Mathworks allow students to get a mactel version almost
at the same time as "real scientists". So I say anti-kudos to ITTVIS
for treating students as second class idlizens! :-(

Gianguido

It's the other way around, surely?

Mathworks have the class system, allowing students to treat themselves as second
class citizens (by offering them a second class product at a second class
fare), while ITTVIS operate a egalitarian one-fare-for-all policy. That seems
pretty fare to me ;-)
