
Subject: !P.SYMSIZE still broken? after 5 years?

Hi all,

it seems that if I define !P.SIMSYZE=2, in an idl startup file or at the prompt, it has no effect on the size plot uses. I couldn't figure it out so I logically searched the forum and found this:

<http://tinyurl.com/ylnzej>

Wot?! same problem but `systemtime(1)-t0 = 2.8e6`

So what is going on? did I mess up or is this still an issue?

Thanks for your help,
Gianguido
