Hello there...

I have a simple question (I guess...).

I have an array with two columns and a thousand of rows. Each row has a pair of latitude and longitude.

Array=floatarr(2, 1000)

-27.3456 -54.6529

-23.4546 -56.7263

... and so on...

I need to retrieve only 100 pairs, randomly. How can I do that?

Any comments welcome!

Julio

I hadn't realised this is such an interesting problem... thanks for that. Are you using this for something?

regards,
Greg
