I'd like to have three vertical plots abutted vertically, with the bottom plot having the labels on the x axis and the other plots just having tick marks. I can use the YMARGIN=[lower,upper] keyword to the plots, but I have not succeeded in getting all the plot boxes to have the same size, because the bottom plot gets vertically scrunched in order to have room for the x axis tick mark labels. Does someone have a handy driver routine to handle this, or do I need to fiddle around with the POSITION keyword? Even here, how can I make sure that the axis boxes all have the same size? Thanks!
