Hi,

I would like to distribute an IDL application that uses of some of the built-in ENVI routines (e.g., ENVI_GET_MAP_INFO, ENVI_INIT_TILE, ecc.) with the IDL virtual machine.

Did anyone tried to do that ? Is it possible or the users need to have an ENVI license in order to have access to ENVI routines ?

Thanks for your help,

Lorenzo Busetto

An ENVI license is necessary. The last time I asked there were no plans to implement an ENVI virtual machine either.
