Hello everyone

i use idl/envi to do some statistic works. first i read landsat tm into envi, calculate ndvi, and so on .

my question is how can i use envi in batch mode to build mask form EVFs. It's certainly well know in ENVI , open a image and EVFs, click basic tool-mask-build mask. But every month i need do it again according different landsat tm image. It's really boring . I lookup in ENVI library routines for such routine. but i find only ENVI_MASK_APPLY_DOIT , which apply mask to a image. can anybody help me solve this problem?
