I don't use favorites, but a simple test shows I do retain my favorites between launches of the program.

```
IDL> print, !version  
{ i386 darwin unix Mac OS X 6.3 Jun 27 2006    32    64 }
```

Yeah, me, too. No problems retaining favorites between launchings of HELP, IDL, etc.

Cheers,

David

For recent versions of IDLWAVE and IDL ≥ 6.2 , there is no integration required. It should "just work". At the most, you might need to set `idlwave-system-directory` to point to your RSI install on Windows. You can do this through IDLWAVE->Customize->Browse IDLWAVE Group->Idlwave Routine Info-> Idlwave System Directory.

Is there a default install location I should use for Windows?

BTW, C-c ? in IDLWAVE is usually a quicker way to see the calling syntax, which would solve this issue for you.
