Hi IDL gurus,

I'm working in a application that uses IDLgrContour and I am stopped in a problem :

I'm using the property sheet's widget in a IDLgrContour, and I am not able to change the properties for each level.

In other hand, I've seen the iconcontour demo, and it displays and lets modify the levels (thick, color, text, etc..).

My question :

How can I mend my property sheet to be able to modify each contour level ?

Thank you
