Hi Antonio,

Well, we all have these moments of utter frustration :-) I would suggest that you do a mosaic "by hand" from the ENVI main menu. Then you will quickly get a feel for what those strange sounding keywords are for, and whether or not you need to specify them.

Good luck!

Mort

ok... I assume then that already you have used mosaic_doit and for
you works in a easy way (like "by hand"), that georeferencing is an
advantage to have the images.

Or it did you not understand what I wanted to say.

I know what "strange sounding keywords ploughs will be" the problem
is that mosaic_doit does not know, or does not know what to make of
them.

Therefore I continue to think that this its message would have to be
for "mosaic_doit" and I does not for me.

But this is my opinion now.

If you are in conditions to say the the opposite to me and it will be

able to help me I will be happy and been thankful.

(

P.S.- I obtain to make mosaic yes, but I have to calculate all the parameters for tell to mosaic_doit, and after having them calculated for what this doit? With two or three, five or six lines of command also if it could make without great efforts... or I am wrong?
