Hi,

I'm familiar with using READ_JPEG to read jpeg files, but how does one get it to work with jpeg data in memory using the BUFFER keyword?

I have a jpeg image that is retrieved from a database (using the dataminer ODBC) and is referenced by a structure with a pointer but BUFFER wants a named variable.

```
temp=*data.jpg
```

```
read_jpeg,image,buffer=temp
```

produces a conflicting keyword error??

I'm sure I'm missing something simple so I'd appreciate some input.

thanks

Brian
