Outlier removal using quartiles

Dear all,

I have a dataset (1D array) with very large outliers that effects the mean and the std. Using a 4rms basic outlier removal is not valid.. hence I want to remove them using quartiles. Please let me know if you have any software already out there for that purpose

Thanks

dilkushi

example

x=[1,3,4,5,90,120,3,3,3,4,5,6]
