Dear all,

I cannot seem to get the cluster function to work. I know the data plays a big role in the computation.. but visually i see 3 clusters in the array. but it groups it into 1 cluster. ie there is nothing where result=1

```
weights = CLUST_WTS(array, N_CLUSTERS = 3)
result = CLUSTER(array, weights, N_CLUSTERS = 3)
;Plot each cluster using a different symbol:
IPLOT, array[*], WHERE(result eq 0)], $
    LINESTYLE = 6, SYM_INDEX = 2
IPLOT, array[*], WHERE(result eq 1)], /OVERPLOT, $
    LINESTYLE = 6, SYM_INDEX = 4
```

please help

thanks

dilkushi
