I want to start the wave license manager at boot time automatically, but the instructions are a bit vague... Has anybody set up such a system, and if so could they please send details.
I thought the /etc/rc2.d/s73nfs.client file would be okay, as my Visilog license (same license manager) is kicked in from there, but I'm not familiar enough with the boot process to be 100% sure of what commands to put in :-(
All help greatly appreciated!

Thanks, Pete.
