Hello IDL/ENVI gurus,

I have been working with ENVI and vectors in one of my projects. I have a requirement to export the vectors created in ENVI, to micro station DGN format. I searched ENVI help but could not locate help about exporting the vectors to DGN. Option for exporting to Shape file exists but not for DGN.

I was wondering if any one of you might have a routine/utility for exporting the vectors to DGN. I would appreciate it if you could share this utility/routine or point out how to solve the problem.

Thanking you in advance

Regards,
Sukesh.
