Hello there,

i need to read in a picture in idl.

my code for doing this is (just as you can read in any book):

```
pro image
device, decomposed=0
imageSize = [137,103]
read_jpeg, 'images.jpeg', image
loadct, 0 ;it's a greyscale picture
window, xsize=200, ysize =150
tv, image
end
```

well, it's not doing it. in the windiw i just get a really small
excerpt from my picture at the left side. how can i get my picture in
the middle of the window??

thanks for the help.

barbara
