You will probably find this article interesting:

http://www.dfanning.com/widget_tips/popup.html

At least it will point out the things you are doing wrong. :-)

Cheers,

David

I got the following to work, although it is a blocking program:

```
PRO experiment_event,  
ev ;event handler  
  widget_control, ev.id, get_value=value  
  widget_control, ev.top, get_uvalue=info  
  
  if value eq 'Quit' then begin  
  widget_control, info.wt, get_value=text  
  *info.ptr = text  
  widget_control, ev.top, /destroy  
  endif  
END
```

PRO experiment,value

```
main = widget_base (title='TEST GUI', /row)  
cntl = widget_base (main, /column)  
  
quitbut = widget_button (cntl, value='Quit') ; GO button\  
wt = WIDGET_TEXT(cntl, XSIZE=15, uvalue='text',/EDITABLE) ;;works.  
ptr = ptr_new(text)  
info = {wt:wt, ptr:ptr}  
widget_control, main, /  
realize ;create the widgets  
  widget_control, main, set_uvalue=info  
  
xmanager, 'experiment', main ; wait for  
events  
  
value = *ptr
```

END

```
experiment,res  
; (insert 'test string', then hit quit)  
print,res  
; prints 'test string'
```

Thank you guys!

I have figured it out thanks to the both of you!
