Version 6.4 seems to do what you want.

> From the New Features descriptions:

XML Read and Write Enhancements

The Init, Load, and Save methods to the IDLffXMLDOMDocument object now support reading and writing XML data from and to IDL string variables, avoiding the need for file input/output.

Similarly, the ParseFile method to the IDLffXMLSAX object allows XML data to be read from a string variable or a remote URL.

For more information, see IDL Object Method Enhancements.

As yes. Apologies, I've been stuck in IDL 6.1 land while working on E.Soft.
