Folks,

Someone asked me today how to display a transparent PNG file
with dimensions [4,93,93] in direct graphics this morning.
This was a logo he wanted to display in the corner of a
map projection. It turned out to be a LOT more complicated
than I expected it to be.

Anyway, I sorted it out and wrote an article about it, as
it is doubtful I remember how to do this in the future. :-)

You can find it here:

   http://www.dfanning.com/documents/tips.html#NewTips

Cheers,

David
