
Subject: widget_label with multiple lines

The following produces a multi-line widget label under Unix and OSX, but not Windows:

```
b=widget_base(/ROW)
l=widget_label(b,VALUE=string(replicate('test',6)+string(10b ),FORMAT='(6A)'))
widget_control, b,/realize
```

Would string([13b,10b]) work under Windows? If not, any other recommendation for a multi-line label?

JD
