Hi group,

Before I dig into it, has anybody knowledge if there is already a spectral resampling script available?

I am searching for a script that resamples (many) spectral data stored in ascii files into spectra according to a given image file.

I am sure I dont have to invent the wheel again. Any help is welcome.

greetings

Jochem

If you have ENVI you can use spectral library resampling (spectral-> spectral libraries)to do this. I've never used the resampling tool to resample to an image (i've used it to resample to instrument bandpasses), but according to the first paragraph of the help file, it can be used for this.
