I want to use IDL open a MS Access database,I have connect the database successly and create a recordset object,but when I read the record value using the getrecord(),a mistake returned.so I print the current record number and found it equal -1.

And then I query the property of the database and found the USE_CURSOR_LIB =0.

Who can tell me why I can't read the record value.

thank you very much!

PRO Soil_database

```
oDB=obj_new('IDLdbDatabase')
```

```
db_list=oDB->getdatasources()
```

```
index=where(STRUPCASE(db_list.datasource[*]) eq 'WISE')
```

```
datasource=db_list[index].datasource
```

```
oDB->connect,datasource=datasource
```

```
tables=oDB->gettables()
```

```
oRS=obj_new('IDLdbRecordset',oDB,table='KEYAREA')
```

```
IF (oRS ->MoveCursor(/last) EQ 1) THEN BEGIN
```

```
  s=oRS ->MoveCursor(/Next)
```

```
  num_1=oRS ->CurrentRecord()
```

```
  print,num_1
```

```
ENDIF
```

```
obj_destroy,oRS
```

```
obj_destroy,oDB
```

```
END
```

```
num_1 = - 1
```
