According to the INTERPOL documentation, the program was speeded up by a factor of more than 100 by changes occurring in 1998 and 1999. This would be after the "fast interpolation" article on my web page was written in 1997. I guess it's time to "retire" that web page. :-)

Cheers,

David

Ah-ha! I should have read the program's header instead of just the entry in the IDL help page.

Thanks,

-Trae

You have to read the article. :-)

Cheers,

David
