
Subject: CHECKBOX default in ION

Hi,

ION is driving me completely nuts and my manual is not helping me.

The value for the variable associated with a checkbox is well defined and retrievable as `$Form.blablabla` if the box is checked. However, when the box is unchecked I get a parser error. Thus, I need to define a default value for an ION checkbox and going through every possible permutation of how to do that fails. Does anyone know how to do that?

Thanks,

Haje
