Subject: CHECKBOX default in ION Posted by Haje Korth on Fri, 24 Aug 2007 16:31:32 GMT View Forum Message <> Reply to Message

Hi,

ION is driving me completely nuts and my manual is not helping me.

The value for the varaible associated with a checkbox is well defined and retrievable as \$Form.blablabla if the box is checked. However, when the box is unchecked I get a parser error. Thus, I need to define a default value for an ION checkbox and going through every possible permutation of how to do that fails. Does anyone know how to do that?

Thanks, Haje
