Subject: Getting code line numbers?

Hi all,

Is there a system variable or similar that keeps track of the name of the currently executing function/procedure and the current line number within?

It is reported when an error occurs, so it must be available somehow.

I need it for reporting events/errors/status to a log file something like

```
log_message(module_name, line_number, 'Warning: The tea is getting cold')
```

Clues, anyone?

Regards,

frank@spacetec.no
