When calling mosaic\_doit, in what part of the routine is the order of your input files established? I have five files that I want to mosaic and I need them to be in a particular order (file 1 at the bottom, file 2 above 1, file 3 above 1 and 2 etc). My suspicion is that this is established when defining the fids to be used for georef\_mosaic\_setup, but I'm not completely sure. Does anyone know?

Thanks.

Matt

hi Matt,

check the POS keyword again, and the example at the end of the help describing mosaic\_doit.

POS must have dimensions [#bands,#files]

for example to mosaic 3 bands of file #1 with the first band from file #2 you should specify: POS = [[0,1,2],[0,-1,-1]]

This, as far as i understand, defines the order of files in your mosaic.

Tal
