
Subject: Using ENVI with IDLWAVE

Folks,

I'm not sure I would even understand the answer to this question, but let me ask it anyway. I'm using the IDLWAVE mode in Emacs. I still can't remember always how to do a damn search and replace, but it's coming along, making progress. When I am working in IDL, a CNTL-C-D-C compiles the file I am editing. But this **doesn't** happen when I have started up ENVI from within my IDL session (by typing "envi"). Why not? And what can I do to make the commands I **do** know how to use in IDLWAVE work when I am working with ENVI?

Cheers,

David
