Hey,

I basically had to do the same thing and I had to start the GUI from
scratch. ION_JAVA provides all the features of IDL except the widgets
and the line continuation ($). But you will see, you will have fun
with ION_JAVA.

Jean

<snip>

Can I ask you then how did you construct the database? For now, I'm
just reading the reference data (just a series of ASCII files) in
memory at startup.
