Nicolas,

The "Source" link is only available when **not** using the OUTPUT keyword. The idea is either you run IDLdoc "in place" (no OUTPUT keyword, just adding the HTML files to the same location as your .pro source files) or send output to another directory (use OUTPUT keyword, HTML files get sent to output directory, but .pro files stay where they are).

When IDLdoc 3.0 comes out, I'm hoping to have a chromocoded version of the source always available from the source link.

Mike

Thank you Mike.

Cheers,
Nicolas
