Hi,

I want to make a scatter plot in IDL. I have three one dimensional arrays with  $z(x,y)$ . I just want a 2-D plot with  $x,y$  as the axis and the  $z$ -component plottet with a color bar. I tried contour since it says it accepts 1-D...but alas, it says  $z$  must be a 2-D array.

Cheers,  
Kim
