Use: wdel,/all

You can find wdel.pro at:

<http://sohowwww.nascom.nasa.gov/solarsoft/gen/idl/display/wdel.pro>

Cheers,
Paolo

Hi, Paolo,

Thank you so much! It's indeed a very useful function.

Best,

Nico

I always use the simple:

IDL> while 1 do wdelete

Works for me.

Matt

Tres elegant! And here I had been muddling along with:

IDL> for i=0,99 do wdelete

Perhaps a smidgen more "elegant":

WHILE (!D.Window NE -1) DO WDELETE

-JM
