We are running PV~WAVE version 3.1 on VMS v5.5

I have a question for all those who have been successful in accessing the IMSL math/stat library from within PV~WAVE. To do this the Call_VMS function requires the routines to be shareable images.

Question : IMSL uses some common blocks for its workspace. Does this mean that to be able to successfully link IMSL with PV~WAVE the IMSL has to be installed write shareable ? This can cause problems with multiple users, so is there any other way ?

I would really appreciate any input on this matter.
