Dear IDL_GANG,

I've got a problem with an IDL 6.4 installation. When I start idl, !path is not defined. This is user specific - the admin who installed this on the cluster has no trouble, but I do. Does anyone know where the default path is set? If I set IDL_PATH to <IDL_DEFAULT> by hand, all is well, but that aught not be necessary...

Mike

```
> idl
IDL Version 6.4 (linux x86_64 m64). (c) 2007, ITT Visual Information
Solutions
Installation number: 8285.
