Folks,

I put a few program updates on my web page today:

<http://www.dfanning.com/documents/programs.html>

In particular, Loren Anderson sent me an updated version of my PSConfig routines that allow the user to select CMYK output. Selecting this keyword assumes you have a LANGUAGE_LEVEL=2 capable PostScript printer. He uses the new routines to create PostScript output suitable for the journals he publishes in.

Cheers,

David
