Hello,everyone! I'm a new IDL programer. Now, I need call some IDL functions in other language program, I have know a little about using "The IDLDrawWidget ActiveX Control" in other language, but I don't know how can I pass parameters between two languages. For example, I need get a parameter of int array type from a program using c# language, but when I define a variable in c# and give it default data and use this variable in IDL function, there is an ERR about "the parameter of this function must be an int array type!"
