This question doesn't make any sense. An IDLgrPlot object *is* a plot. It doesn't draw plots. Why don't you tell us what you are trying to do.

Cheers,

David

Ok, I want to draw 2 different graphics in the same IDLgrPlot object, or in the same area in my application.

With a simple command line we can do PLOT, x1, y1.. and then OPLOT, x2, y2..

With that we can visualize 2 different graphics in the same window.

IDLgrPlot objects has a different fonctionament and I want to draw in a the same area 2 plots. Is for these reason that I ask if it's possible.

I think that it's imposible because, as you say, IDLgrPlot object "is" a plot.

The solution is draw the plots in differents graphic object and visualize in the same area together??

The solution is to put two IDLgrPlot objects in
the same IDLgrView object.

Cheers,

David
