
Subject: What's my colour table?

Hi guys,

quick question: is there a system variable that stores the colour table that I've currently got loaded? So that I can, for example, store that number in a variable within a function, load a new colour table, and then load back the old one before I return back to the previous level? I can't find it in the helpfile if it's there.

e.g.

FUNCTION CTTEST, Data

```
OldCT = !D.CT ; or whatever it's called
CTLOAD, 0    ; load greyscale
; do something that requires greyscale
S = SIZE (Data, /DIM)
RoI = DEFROI (S[0], S[1])
```

```
; and grab back the old colour table
CTLOAD, OldCT
RETURN, RoI
END
```

Thanks,
Chris
