Hi Guys:

I am trying to find the FWHM values in the Header file of MASTER image. I clicked Edit ENVI Header and after selecting the desired image clicked O.K. In Edit Attributes I selected FWHM. After selecting the first band, I receive 0.000 values. Where can I find FWHM values to enter manually or import it as an ASCII file.

Best Regards,

Arshad

If you open the calibration header file (has a \*.ph extension) in a text editor like Word Pad, you'll see several columns of data for each band. One of them is FWHM.

Thank you very much Devin. I appreciate your knowledge. I was looking  
this file in the SRF for days but the "Band Number: 01" statement was  
confusing me that if it is band number 01 where are the rest of  
bands.

Regards,
