I have install idl+envi+envi zoom in every possible linux distribution... (ubuntu, kubuntu, fedora, suse, mandrake...)

Everything is working fine except the ENVIZOOM feature extraction module.

The module works perfect EXCEPT of the last menu of the whole module...

It shows NOTHING a blank menu....

Any idea??

Hi Kostas,

What resolution are you running at? Are you running at 800x600 by chance? It could be that the last panel is too large for the display and isn't being drawn correctly. I had it installed on the newest ubuntu 64 bit distro and haven't noticed any problems.

Chris
