
Subject: ENVI Graphics Colors (only grayscale)

When running ENVI on my Linux system, the only graphics colors (annotation, etc) available seem to be a few gray scale colors? The menu seems to indicate that there are others to choose from but selecting them doesn't do anything. Selecting GCP's is difficult when you can't see them? Other images display fine in color? I suspect it must have something to do with the color model.....

Thanks

Axel
