
Subject: Where are 3D PIE CHART/EXPLODING PIE CHART IDL routines?

I have requirements for a WWW-based information system to generate 3D pie charts and exploding pie charts from a UNIX Web server with IDL.

I would like to use IDL to generate these plots, but IDL doesn't really support a circle or arc graphics primitive. A fast arcfill routine would be helpful.

Has anybody written either an EXPLODING PIE CHART or 3D PIE CHART routines for IDL? I've written a simple LOTUS 123-like pie chart routine, but I need to find a more sophisticated one that produces Excel and Quattro Pro-like charts. Even some C code that can provide the same function would be helpful, since I could convert it to IDL.

Any help would be appreciated. Thanks in advance.

Jason
