
Subject: PV-WAVE and x-axis annotations

I cannot get PV-WAVE to write coorectly (with the PostScript driver) an x-axis annotation with exponents. The number in the exponent is touching the axis so that it looks ugly. I tried so many settings of margin, position, etc that I am getting sick and tired of such pv-wave imperfections (in my opinion it should be done right without even having to change any system variable).

So two questions:

- 1- How can I do it right ?
 - 2- Does that problem exist in IDL ?
-
