First, try to figure out precisely which cases this occurs in. Once you've done so, write a program that is as simple as possible while still demonstrating this problem. Then post the ENTIRE program to this newsgroup. If the problem is data dependent, and the data is coming from a file, you'll have to figure out how to make that file available to us for examination. Therefore, it would be better if you can figure out how to trigger the bug using data provided directly by the code.

Read this: <http://www.catb.org/~esr/faqs/smart-questions.html>
especially: <http://www.catb.org/~esr/faqs/smart-questions.html#beprecise>

Good luck.
